

IN THE ABSTRACT:

Please add the following Abstract:

ABSTRACT

The invention relates to a rapid input device comprising at least one input means, at least one input-capture unit and a computer. The input means defines at least one point by means of the spatial position thereof and the co-ordinates thereof are converted into electric signals in the at least one input capture unit and form at least one amount of data during a period of time from the points and the input thereof. The input capture unit is connected to the computer. Said computer is provided with means for processing the at least one amount of data. The input capture unit is connected to the computer in a wireless manner or by means of a cable. Said rapid input device is mobile and compact. The invention also relates to a method for operating said device and the uses thereof in pad devices, general computer work and rehabilitation.
